

Phenomenon & Questions

- Teens in today's age pay more attention to their phones during everyday activities, and lose the sense of awareness.
 - Why are teens always so into their phones?
 - What are the effects of always being on your phone?
 - Is this affecting face-to-face communication?
 - Does this cause any mental health issues?

Pattern

Not Paying Attention While Walking

- Have noticed kids not looking where they are going bc they are too invested in their phones.
- Don't talk to anyone, and lose social skills
- Don't pay attention to traffic including other people, cars, and bikes.
- Causes neck and back strain, and also completely changes how someone walks.

Lenses

Pattern

In School/School Work

- In recent years, many kids have begun to use phones to help them cheat on school work.
- Phones cause a huge distraction in and out of the classroom, causing students to now rely on AI to do work for them.
- Phones have been a major factor in kids doing worse on tests bc they are too... distracted by them while learning.
.....

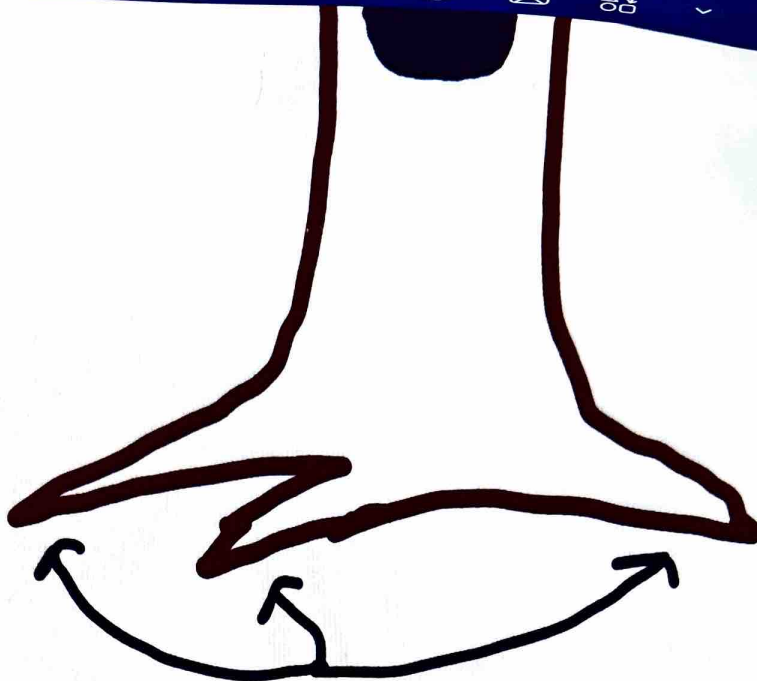

Pattern

Mental Health Problems

- Because of phones, people have noticed higher levels of anxiety and stress bc they feel that they always need to be texting.
.....
- Limits in-person interactions and hurts self-image causing depression in a lot of teens.
- Using phones at night, right before bed can cause sleeping problems, and worsens your mood.
- Causes someone to always feel the need to be checking notifications, and causes withdrawal problems.
.....

Conclusion & Questions

- Should we pay more attention to their phones during class, and lose the sense of awareness?
- Are we always so into their phones?
- What are the effects of always being on your phone?
- Is anything face-to-face communication?
- Do we use any mental health resources?

Lenses

Lens 1: U.S. Dept. of Health

- Shows how screen time affects teens.
